

### Le Soulier - new pitch and retrofit (p43) [B] \*

A new pitch has been added below the original start, and the climb is now entirely protected by bolts - no gear is required.

The new pitch starts at the base of the cliff, just beyond a large fir tree (the last of three) growing close to the approach trail. Follow the cliff up and right for about 6 m to the base of a diagonal ramp/break which angles up to the right. A bolt is visible on the ramp about 8 m up.

1. **2.5 m, 5.5.** Climb the ramp past two bolts to a ledge on the left and then go up (5.5) past two more bolts to reach the main ledge and a bolted station just left of the big tree.

2 - 4. As per guidebook - entirely bolt-protected.

Revised crag photo and topo as shown:
